PROBLEM STATEMENT

In today's digital era, traditional resumes alone are not enough to showcase skills and projects effectively. Many students and professionals lack a structured online presence to highlight their work. A digital portfolio provides an interactive and accessible platform to present achievements, skills, and experiences

PROJECT OVERVIEW

This project is a portfolio website built using HTML, CSS, and JavaScript. It has sections for About, Skills, Projects, and Contact, navigated without page reload.

The Skills and Projects use card-based layouts with responsive design. The Contact form accepts only Gmail addresses, checks for common mistakes (like "gamil.com"), The design uses modern CSS styles with grids, shadows, and a clean layout.
